Art Unit: 1761

In view of the Appeal Brief submitted April 14, 2003, the finality of the last Office action is withdrawn.

Claims 1-22 and 40-47 are allowed.

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 25-39 and 48-72 rejected under 35 U.S.C. 102(b) as anticipated by or, in the alternative, under 35 U.S.C. 103(a) as obvious over Fleury et al.

Fleury et al teach a method of preparing a calcium fortified yogurt comprising using a calcium phosphate in powder form having a mean diameter of less than 65 μm (see entire document, especially the claims and the Examples). Fleury also teaches that the dairy product is free of a fruit ingredient and that the product may be aerated and frozen (see the claims, especially claims 10, 15, and 25).

Art Unit: 1761

The claims appear to differ as to the recitation that the calcium phosphate comprises particles having a mean diameter of $\leq 6 \mu\text{m}$. The teaching of Fleury et al encompasses that of the claimed invention wherein the claimed diameter would be no more than inherent and/or obvious to that of Fleury et al..

The addition of calcium phosphate to dairy products is notoriously well-known in the art. The Applicant is using well-known calcium phosphate to obtain no more than expected results.

The recitation that the product is made by a new process, if the process were indeed new and patentable, does not render an otherwise unpatentable product new and patentable. It is pointed out that the rejected claims are product claims and not process claims. The product must stand on its own invention, independently of the process of producing same. See *In re Marosi*, 218 USPQ 195; *In re Thorpe*, 227 USPQ 964; *Ex parte Jungfer*, 18 USPQ 2nd 1976.

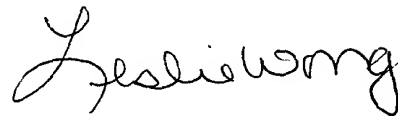

In the absence of unexpected results, it is not seen how the claimed invention differs from the teachings of the prior art. Applicant's claims are drawn to a combination of known components which produces expected results, see *In re Kerkhoven* 205 USPQ 1069 and *In re Gershon* 152 USPQ 602.
